Art Unit: 2613

DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 2. Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim 1 has the limitation "input laser will cause the photo-resistor... to become smaller".

The specification also has this phrase, but the concept of an input laser causing a photo-resistor to become smaller does not make sense.

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the photo-resistor". There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Herman et al. ("Herman") (US Patent No. 5367158).

Regarding claim 1, Herman disclose a circuit device dedicated in a remote control switch (fig. 5) comprising: a voltage conversion circuit for converting AC input current to DC current (col. 5, lines 21-47); an optical controlled relay comprising: a photo sensor for sensing a laser light and receiving the DC current from the voltage conversion circuit, wherein input laser light will cause the voltage of the photo sensor to be smaller (fig. 4A, element 32 and col. 5, lines 40-47 and col. 7, lines 25-29); a switch button generating a trigger signal as the photo sensor senses an input laser light (fig. 4A, element 144 and col. 7, lines 25-40); a signal integrated circuit which is turned on as the signal integrated circuit receives the trigger signal from the switch button (fig. 4A, element 178 and col. 7, lines 25-52); a flip-flop capable of changing state as the signal integrated circuit is turned on (fig. 4A, element 174 and col. 6, lines 32-37); a relay for changing the operation state when the relay receives an input signal from the signal integrated circuit (fig. 4B, elements 174, 196 and 40 and col. 7, lines 41-52); thereby, the electric device connected to the flip -flop can be switched on or off when the flip-flop changes state (fig. 4B, element 198 and col. 7, lines 41-52).

Regarding claim 2, Herman discloses the circuit device dedicated in a remote control switch as claimed in claim 1, wherein the optical controlled relay is actuate when it is radiated by

Application/Control Number: 10/632,163

Art Unit: 2613

laser without needing to adjust the receive frequency or the focus to the laser (col. 7, lines 25-

52).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure:

US Patent No. 4904993 – Discloses a remote control apparatus for actuation that

Page 4

uses optical signals.

8. Any inquiry concerning this communication from the examiner should be directed to N.

Curs whose telephone number is (571) 272-3028. The examiner can normally be reached on

M-F (from 9 AM to 5 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Jason Chan, can be reached at (571) 272-3022. The fax phone number for the

organization where this application or proceeding is assigned is (571) 273-8300. Any inquiry of

a general nature or relating to the status of this application or proceeding should be directed to

the receptionist whose telephone number is (800) 786-9199.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pairdirect.uspto.gov. Should you have questions on access to the Private

PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
